

CHAPTER 7

Measurement and Conversion

Objective 1: Section 7.1 Using Customary Measurement

Learn US Customary Measurements:

Length

12 inches (in) = 1 foot (ft) → note: (ft) can be singular (Foot) or plural (feet)

3 feet (ft) = 1 yard

5280 feet (ft) = 1 mile (mi)

Capacity

8 Fluid ounces (fl oz) = 1 cup (c)

2 cups (c) = 1 pint (pt)

2 pints (pt) = 1 Quart (qt)

4 Quarts (qt) = 1 gallon (gal)

Time

60 seconds (sec) = 1 minute (min)

60 minutes (min) = 1 Hour (hr)

24 Hours (hr) = 1 day orbital Period $\frac{24 \text{ Day}}{4}$

7 Days = 1 Week (wk)

Weight

16 ounces (oz) = 1 pound (lb)

2000 pounds (lb) = 1 Ton

Objective 2: Use multiplication or Division to Convert Between Units

Example 1: Convert the Following

a) 7 Feet to inches → $\left(\frac{7 \text{ ft}}{1}\right) \left(\frac{12 \text{ inches}}{1 \text{ Foot}}\right) = 84 \text{ inches}$
given Quantity or 84 in

NOTE: This conversion is also called a UNIT FRACTION - IT REPRESENTS A UNIT OF 1. This conversion factor is arranged to convert Feet to inches.

Dimensional Analysis: Numeric Quantities

$$\left(\frac{84 \text{ in}}{1} \right) \left(\frac{1 \text{ foot}}{12 \text{ in}} \right) \rightarrow 7 \text{ FT} \rightarrow$$

Given quantity This conversion factor will convert inches to Feet

Dimensional Analysis with TWO Conversion Factors

How many inches in one mile?

convert 2 miles to inches:

$$\left(\frac{2 \text{ mi}}{1} \right) \left(\frac{5280 \text{ ft}}{1 \text{ mi}} \right) \left(\frac{12 \text{ in}}{1 \text{ ft}} \right) = 126,720 \text{ inches}$$

* This conversion factor

Given quantity Converts Feet to inches from miles to Feet.

Objective 3: USE UNIT ANALYSIS TO CONVERT BETWEEN UNITS

Example 2: Convert the following

a) convert 1 miles to inches

$\frac{10}{(0.1)}$

$$\left(\frac{0.1 \text{ mi}}{1} \right) \left(\frac{5280 \text{ ft}}{1 \text{ mi}} \right) \left(\frac{12 \text{ in}}{1 \text{ ft}} \right) = 6,336 \text{ inches}$$

given quantity converts miles to Feet converts Feet to inches.

Part B : How many Gallons to oz?

$$\left(\frac{1 \text{ gallon}}{1} \right) \left(\frac{4 \text{ qt}}{1 \text{ gal}} \right) \left(\frac{2 \text{ pints}}{1 \text{ qt}} \right) \left(\frac{2 \text{ cups}}{1 \text{ pint}} \right) \left(\frac{8 \text{ fl oz}}{1 \text{ cup}} \right) = 128 \text{ fl oz}$$

given quantity converts gallons to quarts converts quarts to pints converts pints to cups

Objective 4: Solve Applied Problems Using Conversion.

Example 3:

A Ladybug Flaps its wings 85 times per second. How many times does it flap its wings in 5 minutes?

$$\left(\frac{5 \text{ minutes}}{1} \right) \left(\frac{60 \text{ seconds}}{1 \text{ min}} \right) \left(\frac{85 \text{ flaps}}{1 \text{ second}} \right) = 25,550 \text{ Flaps}$$

given quantity (to seconds) minutes / flaps per second

68 From Homework

Trina will make buttermilk pancakes for her daughter's Pajama Party. She has to make six batches, and each batch uses $2\frac{1}{2}$ c buttermilk. How many pints of buttermilk should she buy?

$$\left(\frac{6 \text{ batches}}{1} \right) \left(\frac{2\frac{1}{2} \text{ cups}}{1 \text{ batch}} \right) \left(\frac{1 \text{ pint}}{2 \text{ cups}} \right) = 7\frac{1}{2} \text{ pints} \Rightarrow \text{Trina must buy 8 pints.}$$

given quantity

7.2 The metric System: Units of Length

The metric system is ALSO called The International System of Metric units of Length units (SI)

1 Kilometer (km) = 1000 m "System international"

1 hectometer (hm) = 100 m

1 dekameter (dam) = 10 m "Deka" means $\times 10$

1 meter (m) = 1 m

1 decimeter (dm) = $\frac{1}{10}$ m or 0.1 m

1 centimeter (cm) = $\frac{1}{100}$ m or 0.01 m

1 millimeter (mm) = $\frac{1}{1000}$ m or 0.001 m

Examples

4 Dekameters = 40 meters

"milli" = $\frac{1}{1,000}$

20 decimeters = 20 meters
10

"Centi" = $\frac{1}{100}$

"deci" = $\frac{1}{10}$

1000 mm = 1 meter

"deka" = $\times 10$

100 centimeter = 1 meter

"hecto" = $\times 100$

10 decimeters = 1 meter

"Kilo" = $\times 1,000$

Example 1: Fill in the blank with the appropriate metric unit:

km, m, cm, mm

a) A pen is 14 cm long.

b) David drives 8 km to work.

c) The lens on a phone camera is 3 mm wide.

d) The length of a Soccer Field is 72 m.

Objective 2: Use Unit Fractions To Convert Between Units

Example 2: Convert the following: 2 kilometers to meters

$$a) \left(\frac{2 \text{ km}}{1} \right) \left(\frac{1,000 \text{ m}}{1 \text{ km}} \right) = 2,000 \text{ m}$$

b) 162 mm to m:

$$\left(\frac{162 \text{ mm}}{1} \right) \left(\frac{1 \text{ m}}{1,000 \text{ mm}} \right) = \frac{162 \text{ m}}{1,000} = 0.162 \text{ m}$$

c) 1.5 m to cm:

$$\left(\frac{1.5 \text{ m}}{1} \right) \left(\frac{100 \text{ cm}}{1 \text{ m}} \right) = 150 \text{ cm}$$

Objective 3: Convert Between units using the Metric Conversion chart

Powers of

10

← Kilo ← Hecto ← Deca ← deci → centi → milli →
one unit to the left means 10 one unit to the right means 10

Example 3: Convert the following using the conversion chart

a) 1 km to m = move 3 times to the right.
multiply $10 \times 10 \times 10 = 1,000$

"move the decimal to the right 3 times"

1,000 m

b) Convert: 2.378 m to decimeters:
= 23.78 dm

c) 13 dekameters to cm \rightarrow 13,000 cm

7.3 The Metric System: Capacity and Weight (Mass)

↓
Refers to Volume

↓
not the same as weight.

Objective 1: Learn the basic units of Capacity

Metric units of Capacity

1 kiloliter (kL) = 1000 L

1 hectoliter (hL) = 100 L

1 dekaliter (daL) = 10 L

1 liter (L) = 1 L

1 deciliter (dL) = $\frac{1}{10}$ L or 0.1 L

1 centiliter (cL) = $\frac{1}{100}$ L or 0.01 L

1 milliliter (mL) = $\frac{1}{1000}$ L or 0.001 L

Objective 2: Convert Between metric Units of Capacity

1000 L	100 L	10 L	1 L	$\frac{1}{10}$ L or 0.1 L	$\frac{1}{100}$ L or 0.01 L	$\frac{1}{1000}$ L or 0.001 L
kL	hL	dL	L	dL	cL	mL
(kilo)	hecto	deka		deci	centi	milli

Example 2: Convert the following using the conversion chart and by dimensional analysis.

a) 1,200 mL to dL \rightarrow using the chart we need to move the decimal two places to the left

$$1,200 = 12 \text{ dL}$$

using unit fractions

$$\left(\frac{1,200 \text{ mL}}{1} \right) \left(\frac{1 \text{ L}}{1,000 \text{ mL}} \right) \left(\frac{10 \text{ dL}}{1 \text{ L}} \right) = 12 \text{ dL}$$

Part b: Convert 2,500 mL to hectoliters (hL)

using the chart, we move 5 places to the left.

~~2500~~,0 \rightarrow 0.02500 \Rightarrow We disregard the last two zeroes, so the answer is 0.025 hL

using unit fractions:

$$\left(\frac{2500 \text{ mL}}{1} \right) \left(\frac{1 \text{ L}}{1,000 \text{ mL}} \right) \left(\frac{1 \text{ hL}}{100 \text{ L}} \right) = 0.025 \text{ hL}$$

Objective 3: Learn basic units of mass

1 small paperclip = About one gram

1 nickel = 5 gram

an iPhone 4s = 140 g

Metric units of mass

$$1 \text{ kilogram (kg)} = 1000 \text{ g}$$

$$1 \text{ hectogram (hg)} = 100 \text{ g}$$

$$1 \text{ deekagram (dag)} = 10 \text{ g}$$

$$1 \text{ gram} = 1 \text{ g}$$

$$1 \text{ decigram (dg)} = \frac{1}{10} \text{ g or } 0.1 \text{ g}$$

$$1 \text{ centigram (cg)} = \frac{1}{100} \text{ g or } 0.01 \text{ g}$$

$$1 \text{ milligram (mg)} = \frac{1}{1000} \text{ g or } 0.001 \text{ g}$$

examples =

→ If you filled this box with water, the mass of the water in this cube would be 1 gram
so 1 cm^3 of water = 1 gram of water

The Average man Weighs 84 kg.

Objective 4: Convert between metric units of weight (Mass)

1000 g	100g	10g	1g	$\frac{1}{10}$ or 0.1g	$\frac{1}{100}$ or 0.01g	$\frac{1}{1000}$ or 0.001g
kg	hg	dag	g	dg	cg	mg
(kilo)	(hecto)	deka		deci	centi	milli

REFER to chart.

a) 0.04 kg to cg

$$0.\underline{04000} = 4,000 \text{ cg}$$

b) 0.02 dg to hectogram (hg)

$$0.\underline{00002} = 0.00002 \text{ hg}$$

c) 0.02 dag to hg =

$$0.002 \text{ hg}$$

7.4 Solve Applied Problems Involving Metric Units

Objective 1: Perform operations with metric units

Example 1: Add or Subtract as Indicated

1) 10 cm + 50 cm → convert to like terms

10 cm to mm

or mm to cm = 10 cm + 50 mm

$$100 \text{ mm} + 50 \text{ mm} = 150 \text{ mm}$$

$$10 \text{ cm} + 5 \text{ cm} =$$

the answers are equivalent

15 cm

2) 3.25 kg - 455 g

$$\begin{array}{c} \downarrow \\ 3.\underline{250} \text{ kg} \end{array} \rightarrow 3,250 \text{ g} - 455 \text{ g} = 2,795 \text{ g}$$

Example 2:

90 kg of rice is divided into 120 bags. How many grams

Does each bag weigh?

$$\left(\frac{90 \text{ kg}}{1}\right) \left(\frac{1000 \text{ g}}{1 \text{ kg}}\right) = 90,000 \text{ grams} = 750 \text{ grams} \text{ Per every bag.}$$

120 bags

Example 3.

A length of cloth is 1 meter 4 cm long. How much cloth is left if you cut off 30 cm?

104 cm total.

$$\begin{array}{r} (1 \text{ m} + 4 \text{ cm}) \text{ or } 104 \text{ cm (Length of cloth)} \\ 100 \text{ cm} + 4 \text{ cm} = 104 \\ \hline - 30 \text{ cm (amount you cut off)} \\ \hline 74 \text{ cm of cloth left.} \end{array}$$

7.5 Metric - U.S. Customary conversions and Temperature:

Relationships Between U.S. Customary Units and Metric Units

Length

1 inch = 2.54 centimeters

1 Foot ≈ 0.30 meter

1 yard ≈ 0.91 meter

1 mile ≈ 1.61 kilometers

Capacity

1 cup ≈ 236.59 milliliters

1 quart ≈ 0.95 liter

1 gallon ≈ 3.79 liters

Weight (mass)

1 ounce ≈ 28.35 grams

1 pound ≈ 0.45 kg

Converting between Fahrenheit and

Celsius units

change from °F to °C From °C to °F

$$C = \frac{5}{9}(F - 32)$$

$$F = \frac{9}{5}C + 32$$

Examples $^{\circ}\text{C} \rightarrow ^{\circ}\text{F}$ 25° Celsius To Fahrenheit

$$F = \frac{9}{5}C + 32$$

$$F = \frac{9}{5}(25) + 32$$

$$45 + 32 = 77 \text{ Degrees Fahrenheit}$$

From $^{\circ}\text{F} \rightarrow ^{\circ}\text{C}$

$$32^{\circ}\text{F} \rightarrow ^{\circ}\text{C}$$

$$212^{\circ}\text{F} \rightarrow ^{\circ}\text{C}$$

$$C = \frac{5}{9}(F - 32)$$

$$C = \frac{5}{9}(212 - 32) =$$

$$C = \frac{5}{9}(32 - 32) = 0$$

$$C = \frac{5}{9}(180)$$

$$C = 100^{\circ}\text{C}$$

Example 1 Convert the Following

a) 1 mi to km

$$\left(\frac{1 \text{ mi}}{1}\right) \left(\frac{5280 \text{ ft}}{1 \text{ mi}}\right) \left(\frac{12 \text{ in}}{1 \text{ ft}}\right) \left(\frac{2.54 \text{ cm}}{1 \text{ in}}\right) \left(\frac{1 \text{ m}}{100 \text{ cm}}\right) \left(\frac{1 \text{ km}}{1,000 \text{ m}}\right) =$$

$$= 1.609 \text{ km}$$

Part B: Convert 420 yd to cm

$$\left(\frac{420 \text{ yd}}{1}\right) \left(\frac{3 \text{ ft}}{1 \text{ yd}}\right) \left(\frac{12 \text{ in}}{1 \text{ ft}}\right) \left(\frac{2.54 \text{ cm}}{1 \text{ in}}\right) = 38,404.8 \text{ cm}$$

c) Convert 32,450 kg to lbs:

$$\left(\frac{32,450 \text{ kg}}{1} \right) \left(\frac{2.2 \text{ lb}}{1 \text{ kg}} \right) = 71,400 \text{ lbs}$$

Part D = 10L → gallon

$$\left(\frac{10 \text{ L}}{1} \right) \left(\frac{1 \text{ gal}}{3.79 \text{ L}} \right) = 2.639 \text{ gallons}$$

E) 10L to cups (1L to cups)

$$\left(\frac{10 \text{ L}}{1} \right) \left(\frac{1.06 \text{ qt}}{1 \text{ L}} \right) \left(\frac{2 \text{ pt}}{1 \text{ qt}} \right) \left(\frac{2 \text{ cups}}{1 \text{ pt}} \right) = 4.240 \text{ cups}$$

F) Convert 65 mph to km/hr

$$\left(\frac{65 \text{ mi}}{1 \text{ hr}} \right) \left(\frac{5,280 \text{ ft}}{1 \text{ mi}} \right) \left(\frac{12 \text{ in}}{1 \text{ ft}} \right) \left(\frac{2.54 \text{ cm}}{1 \text{ in}} \right) \left(\frac{1 \text{ m}}{100 \text{ cm}} \right) \left(\frac{1 \text{ km}}{1,000 \text{ m}} \right) =$$

104.607 km

hr

E) Convert 483 ft to mi

Sec hr

$$\left(\frac{483 \text{ ft}}{1 \text{ sec}}\right) \left(\frac{1 \text{ mi}}{5280 \text{ ft}}\right) \left(\frac{60 \text{ sec}}{1 \text{ min}}\right) \left(\frac{60 \text{ min}}{1 \text{ hr}}\right) = 329.319 \frac{\text{mi}}{\text{hr}}$$

h) $\frac{1000 \text{ cm}}{\text{Sec}}$ to $\frac{\text{miles}}{\text{hr}}$

$$\left(\frac{1000 \text{ cm}}{1 \text{ sec}}\right) \left(\frac{1 \text{ in}}{2.54 \text{ cm}}\right) \left(\frac{1 \text{ ft}}{12 \text{ in}}\right) \left(\frac{1 \text{ mi}}{5280 \text{ ft}}\right) \left(\frac{60 \text{ sec}}{1 \text{ min}}\right) \left(\frac{60 \text{ min}}{1 \text{ hr}}\right) =$$

cm \rightarrow in \rightarrow ft \rightarrow mi \rightarrow Sec \rightarrow min \rightarrow hrs

22.369 miles
hr

I) $\frac{100 \text{ m}}{10 \text{ Sec}}$ to $\frac{\text{mi}}{\text{hr}}$

$$\left(\frac{100 \text{ m}}{10 \text{ Sec}}\right) \left(\frac{100 \text{ cm}}{1 \text{ m}}\right) \left(\frac{1 \text{ in}}{2.54 \text{ cm}}\right) \left(\frac{1 \text{ ft}}{12 \text{ in}}\right) \left(\frac{1 \text{ mi}}{5280 \text{ ft}}\right) \left(\frac{60 \text{ Sec}}{1 \text{ min}}\right) \left(\frac{60 \text{ min}}{1 \text{ hr}}\right) =$$

22.369 mph
